

Part-9 Navigation And Todo class

BY SANTOSH TURERAO.

```
1 <div>
2   Welcome {{name}}.
3
4   Welcome to our awesome App.
5 </div>
6 <div>
7 You can manage your todos <a routerLink="/todos">here</a>
8 </div>
```

Welcome.html

Create a class Todo.

```
export class Todo {  
  constructor(  
    public id: number,  
    public description: string,  
    public done: boolean,  
    public targetDate: Date  
  ) {}  
}
```

```
students = [  
  new Todo(1, "Learn to java script", false, new Date()),  
  new Todo(2, "Learn to java ", false, new Date()),  
  new Todo(3, "Learn to php", false, new Date()),  
  new Todo(4, "Learn to spring boot", false, new Date())  
];
```

```

c / app / list-todos / list-todos.component.html / table / tbody / tr / td
1  <table border="1">
2    <caption>
3      The Table
4    </caption>
5    <thead>
6      <tr>
7        <th>id</th>
8        <th>Description</th>
9        <th>Date</th>
10       <th>Target Date</th>
11     </tr>
12   </thead>
13   <tbody>
14     <tr *ngFor="let student of students">
15       <td>{{ student.id }}</td>
16       <td>{{ student.description }}</td>
17       <td>{{ student.done }}</td>
18       <td>{{ student.targetDate | date | uppercase }}</td>
19     </tr>
20   </tbody>
21 </table>
22

```

.html

All The Best.
